EDUCATION

Full Stack Academy, Chicago — *FSA Certificate of Completion*

SEPTEMBER 2022 - DECEMBER 2022

PROJECTS

Monster Hunter World: Visualizer

Lead API Designer - Web Developer

Designed the API for this full stack app, that takes a different approach from the traditional wiki akin to a stats guide. Collaborated closely with the front-end developer to provide unique and effective UX/UI design. The design prioritized the speed of requests as well as being flexible enough to request anything through simple queries with nesting support.

Create-react-xk

Simple boilerplate code for react based projects published on npm. Compiles on webpack and is minimal on dependencies to customize without the bloat of create-react-app. Simply run 'npx create-react-xk' to get started.

Forever 1%

Back-end Developer - UX/UI Design

Capstone project for FullStack Academy. Designed the user section of the back-end as well as the creative design on the front. Users are able to register securely with JWT authentication and encrypted passwords. Collaborated with other developers to refactor code and decrease bloat in files.

Groups

Greedy Pig Innovations

As a co-founder of Greedy Pig Innovations, I am committed to promoting personal growth and development through the creation of functional web applications.

Skills

Programming Languages

JavaScript (ES6), HTML5, CSS3, PL/psSQL,

Libraries & Frameworks

React, Node.js, Express, Bootstrap, Material UI, Axios

Tools & Platforms

Git, Netlify, Heroku, Github

Other Projects

Ranpo- Discord Bot

A small sound board discord bot that plays the servers most used SFX via slash commands.
